

ALICIA'S TEAM CHARTER INDIVIDUAL QUESTIONNAIRE

PSYCHOLOGICAL SAFETY

1. What helps you feel more comfortable asking questions, giving your opinion, or voicing disagreement?

I feel most comfortable contributing when there is time to think before responding and when discussions are grounded in facts, data, and clear reasoning. I'm more likely to speak up when ideas are evaluated thoughtfully rather than quickly judged and when I feel my perspective will be taken seriously.

2. What makes you feel safer admitting mistakes or asking for help?

If mistakes are treated as part of improving the system rather than as personal failures, I'm more willing to be open. I also feel safer when feedback is specific, objective, and focused on the work rather than the person. I don't like being called out in front of others or feeling like the quality of my work is being attacked.

3. What causes you to shut down in group discussions? What makes you hesitate to contribute?

- Being rushed into decisions or put on the spot without time to think.
- Emotional or unstructured conversation. I need logic and clarity.
- Being called out publicly.

4. What makes you feel open when receiving constructive feedback? What makes you feel defensive instead?

I'm open to feedback when it's specific and fact-based. If it's focused on improving the product or outcome, that helps, and I prefer it to be delivered privately when possible.

I can get defensive when feedback is vague or overly general. If I don't know what specific action to take based on the feedback, it frustrates me. I don't like when it's delivered publicly in a way that is embarrassing or feels like an attack on my work. I also dislike feedback that points out problems without opening discussion on how to actually improve.

5. What does healthy team accountability look like for you?

Clear expectations and ownership. If something goes wrong, we focus on understanding the root cause and improving our processes, not on assigning blame. When I make mistakes, I want to be held accountable in a way that is future-focused. What can we do next, not what should we have done before.

EQUAL TALK TIME

1. What specific practices would help your team ensure all voices are heard?

- Sharing agendas and materials in advance when possible so we can prepare in advance.
- Allowing time for input
- Pauses after questions
- Structured turn-taking (like round robin updates)

2. How should the team handle situations where one person is dominating the discussion?

The facilitator should step in and redirect to ensure others have space to contribute, ideally in a neutral and structured way (like “Let’s hear from others before we move on”).

3. How should the team handle situations where one person is not speaking up at all?

Provide alternative ways to contribute, such as written input or follow-up after the meeting. If inviting them to speak, it should be done with time to prepare, not unexpectedly.

CLARITY

1. How do you prefer decisions to be made? (ex: consensus, lead makes final call, majority vote)

I prefer decisions to be based on data and thoughtful discussion, with time to evaluate options. A “consult and decide” approach works well—input from the team, followed by a clear decision-maker (based on the area of specialization the decision most impacts).

2. What types of ambiguity get in the way of your success on a team? (ex: unclear ownership of tasks, vague expectations, shifting deadlines)

- Unclear technical requirements or acceptance criteria
- Unclear ownership of tasks
- Frequent changes in direction without sufficient explanation
- Tight timelines that don’t allow for careful work

3. What practices can your team implement to ensure clarity in the areas you identified in the previous question?

- Define requirements and success criteria clearly before starting work
- Document decisions and rationale
- Assign clear ownership for tasks
- Plan timelines realistically and avoid last-minute changes when possible

MEANING

1. How do you define success for your team?

Success means delivering high-quality, reliable solutions that meet requirements and are well thought out. It also includes working in a way that is organized, predictable, and efficient.

2. What helps you feel your work is meaningful?

Knowing that what I’m building is correct, well-designed, and solves the intended problem. I also value when my technical expertise is trusted and used effectively.

3. What practice(s) would help your team regularly refocus on your shared purpose?

Clearly connect technical work to the problem it’s solving and define success criteria upfront. Individual pieces can connect back to our overall focus.

FINAL THOUGHTS

1. What are 2-3 communication norms you would like to see your team adopt?

- Share information and materials in advance when possible
- Keep communication clear, structured, and focused
- Provide feedback in a specific, objective, and respectful way

2. What is one practice your team MUST use for you to be successful?

Adequate time to think and process before decisions are made, supported by clear information and expectations.
